**Phone:** 909-793-2853 ext. 4498

Scott Oppmann is a member of a team responsible for the development of Esri's ArcGIS for Local Government solution. ArcGIS for Local Government includes a series of useful maps and apps that help users and partners configure and implement ESRI's ArcGIS software platform.

Prior to joining ESRI in the fall of 2008, Scott served as Oakland County Michigan's Application Services Division Manager and was responsible for the planning, implementation, and support of spatial and non-spatial technology solutions across a diverse customer base. This customer base included more than 40 county departments and the 62 local cities, villages and townships within Oakland County.

He was responsible for implementing Oakland County's unique, multi-participant, enterprise GIS (Geographic Information System) program and on a daily basis interacted directly with participating county departments, local governments and regional/national organizations in an effort to re-engineer government workflow through the implementation of GIS technology.

Since graduating from Michigan State University with a degree in Urban & Regional Planning, Scott Oppmann has spent several years working in the public and private planning arena. He served as a Professional Planner in Johnson County, Indiana, and was Planning & Economic Development Director in the City of Franklin, Indiana.
